About This Game

Overclocked is a free-flowing action-platformer that mixes combat and fluid movement. Take on the role of Amber, a glass-cannon vigilante who is fighting to protect her home from an enigmatic computer virus that amplifies negative emotions and augments physical strength. As tension mounts and new villains capitalize on the chaos, Amber must rely on her strength and her friends to protect her home.

Master a Unique Blend of Combat and Platforming

In Overclocked, one hit means death. Gameplay is divided into short levels that routinely throw new obstacles at the player. In order to survive, you must learn to adapt to these challenges. To thrive, you must master the controls and your ability to fight.

Finding the main story too easy? Each stage has a bonus objective waiting to be conquered. Complete enough of these bonus objectives and you'll unlock brutally difficult challenge levels that will put even the best players to the test.

Uncover a Mystery Threatening your Home

Each episode in Overclocked is driven forward by a compelling story of intrigue and danger. Follow Amber as she and her friends work together to hunt down the source of a virus that is taking control of the people around them.

For the players who just want to get to the gameplay, or for those who are working towards 100% completion, turn on Speedrun Mode and flow through the game without distractions.

Challenge Others for Top Scores

Each stage has its own unique leaderboard, allowing you to compete against your friends and the Overclocked community for the fastest times.

Overclocked tracks your fastest game completion time and submits it to a global leaderboard. Beat the game to see how you stack up against other players. If you're brave, see if you can take the #1 spot.

CMDR MIRANDA PRICE

Welcome to
Kite Station

Commander: M

You must be Jason. When we detected a Starcom vessel, I was hoping it was Captain Lee. No offense, but the Byzantium is a warship.

We had no ships docked at the station when... well whatever that was happened. It looks like you're the only starship we've got.

The Argos is a small ship but my crew and I are ready for anything.

The Byzantium may be a battlecruiser but we have some crates of ancient pottery.

If I could trade places with The Byzantium, I would.
